

Write a program to swap first and last character of a String.

```
import java.util.Scanner;

public class Swap {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        System.out.print("Enter a string: ");
        String s = sc.nextLine();

        char ch[] = new char[s.length()];

        for (int i = 0; i < s.length(); i++) {
            ch[i] = s.charAt(i);
        }

        char c = ch[0];
        ch[0] = ch[ch.length-1];
        ch[ch.length-1] = c;

        String ns= new String(ch);

        System.out.println("New String after swapping "+ ns);
    }
}
```
