

String Questions

1. Accept a name and print it in reverse form.
(If name is AMIT, then output is TIMA)
2. WAP to converting all capital letters of a string into small letters (without using library function).
(For example: Input: MY NAME IS SUMIT → Output: my name is sumit)
3. Take a String and swap first and last character.
4. Take a string and swap first vowel with the last vowel.
5. WAP to accept any string and then convert each 'A' to 'AN' present in that string.
(Note: 'A' should not be a part of a word)
6. Remove duplicate characters from a user given String

Character and ASCII Handling

6. WAP to accept a name. Then display the ASCII value of each character present in that name.
7. A name is to be said as odd name if the ASCII code of each character becomes an odd number.
Write a program to accept a name and check whether the given name is odd name or not.

Vowels and Palindromes

8. WAP to read a word. Print the position of the first vowel occurring in the word.
(If no vowel, then print 'no vowel')
9. Write programs to accept any word and check whether the word is palindrome or not.

Name Formatting

10. WAP to accept a name (in first name & last name format), then display that name in short format.
(Example: SACHIN TENDULKAR → S. TENDULKAR)
11. WAP to accept a person's first, middle and last names in a string variable and then display in short form.
(Example: ARUP KUMAR DAS → A. K. DAS)

Sentence-Level Analysis

12. WAP to enter any sentence and calculate the following:
 - a) Total number of digits
 - b) Total number of small & capital letters

- c) Total number of alphabets
 - d) Total number of special characters
 - e) Total number of vowels
 - f) Total number of words
13. Accept two strings: a word and a sentence. Then find number of times the word is present in the sentence.
(Example: 'THE' in 'THE BIG FAT THEODORE' → 2)
14. WAP to accept a sentence then convert each character to second next character.
(A → C, Y → A, Z → B)

Word-Level Rearrangement

15. Write a program for converting a sentence in reverse order of words.
16. Write a program to input a sentence and arrange words of the string in order of their lengths from shortest to longest.

String Pattern Matching

17. Take a string and check if it's an email or not.
18. Take a string and check if it's a date or not in given format: dd/mm/yyyy

Creative Word Transformation

19. In Piglatin, a word such as KING becomes INGKAY, TROUBLE becomes OUBLETRAY, etc. Write a program to accept a word and convert it into Piglatin.

Piglatin Rules:

If the word begins with a vowel (a, e, i, o, u):

- Leave the word unchanged.
- Just add "AY" to the end
- Example:
 - APPLE → APPLEAY

If the word begins with a consonant (non-vowel):

- Move all the letters before the **first vowel** to the end of the word.
- Then add "AY" at the end.
- Example:
 - KING → INGKAY
 - TROUBLE → OUBLETRAY

20. Find Longest Word

Accept a sentence and print the longest word in it.

21. Find Shortest Word

Accept a sentence and print the shortest word in it.

22. Print Words Ending with a Specific Letter

Accept a sentence and a character. Print all the words that end with that character.

23. Extract Words of Given Length

Accept a sentence and an integer n . Print all words that are exactly n letters long.

24. Sort Words Alphabetically

Accept a sentence and print all words in alphabetical order.

25. Sort Words by Length

Accept a sentence and sort words from shortest to longest.

26. Find Word with Highest ASCII Sum

Accept a sentence and find the word whose characters sum to the highest total ASCII value.

27. Extract Words Whose First and Last Letters Are Same

Accept a sentence and print words where the first and last characters are the same.

28. Extract Words with Prime Length

Accept a sentence and print all words whose lengths are prime numbers.

29. Check if Sentence Has a Pangram

Accept a sentence and check if any of its words individually are pangrams.

(A pangram contains every letter of the alphabet at least once.)

30. Find All Anagram Words in a Sentence

Accept a sentence and a word. Print all words in the sentence that are anagrams of the given word.

Example: Input: "listen silent enlist inlets", word: "listen" → Output: silent, enlist, inlets
