

Test on Chapter 1 (unit 1)

Total Marks: 30

MCQ:

5x1=5

1. Multiple things with same name but different purpose can be referred as
 - a. Polymorphism
 - b. Encapsulation
 - c. Data Abstraction
 - d. Inheritance
2. A class deriving properties of another class is known as
 - a. Inheritance
 - b. interface
 - c. insecurity
 - d. encapsulation
3. Hiding background data and only showing the interface is called:
 - a. encapsulation
 - b. inheritance
 - c. data abstraction
 - d. polymorphism
4. Combining multiple units in a single unit is known as
 - a. abstraction
 - b. correlation
 - c. encapsulation
 - d. interface
5. Codes used in assembly language are known as
 - a. High level codes
 - b. Binary values
 - c. low level codes
 - d. Mnemonics

True / False:

5x1=5

1. Computer can directly understand any language
2. Machine language uses OP Codes
3. High level languages are machine dependent
4. It's easy to detect and correct error in machine language
5. Procedure programming uses bottom top paradigm

Fill and the blanks:

5x1=5

1. Two types of languages are _____ and _____.
2. Three types of language translators are _____.
3. C is an example of _____ language
4. Object Oriented Programming has emphasis on _____.
5. Procedure oriented programming has emphasis on _____.

Answer the following questions.

1. Classify Programming languages. Describe each. 5
2. What are the four main principles of object oriented programming 2.5
3. Distinguish between High level and low level programming. 2.5
4. Distinguish between Object Oriented Programming and Procedure oriented programming 2.5
5. Distinguish between Interpreter and compiler. What is assembler ? 2.5
