

Test on Values and Data Types

Total Marks: 50

Time: 1 Hour 15 Minutes

Date: 30/05/2024

Q1. Choose the correct one.

10x1=10

- Which type of numbers are used in UNICODE ?
a) Binary b) Decimal c) Hexadecimal d) Octal
- ASCII has _____ number of codes to represent characters.
a) 256 b) 127 c) 128 d) 255
- Implicit type casting is also known as
a) coercion b) explicit c) correlating d) coersive
- which of these is a boolean literal
a) 'true' b) "true" c) True d) true
- int k=5/2; k = ?
a) 2.5 b) 3 c) 2 d) 2.0
- which of the following is not a token in java?
a) int b) = c) inheritance d) ?
- which of the following is arranged in proper precedence of logical operators?
a) && || ! b) ! && || c) || && ! d) ! || &&
- Which of the following is not a primitive data type ?
a) int b) double c) String d) float
- Which among the following is not a punctuator?
a) semicolon (;) b) comma(,) c) colon (:) d) dot(.)
- If a is of type int and b is of type float what would be the resultant data type of a+b?
a) double b) int c) float d) long

Q2. State whether the following statements are true or false, Also write the reasons to justify.

10x1=10

- escape sequence can be used in a String literal
- converting from float to long is implicit type casting
- Unary operators use two operands.
- ASCII has more character than UNICODE
- A variable name can start with a number.
- '-2' is a valid character literal
- final keyword is used to make a variable constant
- 1.2f and 4.5d are valid float and double literals
- char + char results as int
- = is relational and == is assignment operator

Q3. Fill in the blanks:**10x1=10**

1. String is a _____ data type
2. () {} [], are known as _____
3. ? ; . are known as _____.
4. Size of int is _____ bytes
5. Escape sequence for horizontal tab is _____
6. Escape sequence for carriage return is _____
7. Character literals are enclosed within _____
8. String literals are enclosed within _____
9. ASCII for 'E' is _____
10. default value of boolean operator is _____

Q4. Answer the following:**10x2= 20**

1. Describe the character set available in java.
 2. What are delimiters? Write a special character which is not a delimiter.
 3. Distinguish between ASCII and UNICODE.
 4. What are escape sequences? Give example of usage.
 5. What are pure and impure expressions? Give example of each.
 6. Distinguish between expression and a statement. Give example of each
 7. Define Type Conversion (Also known as Type Casting). Give example for implicit and explicit. Explain why is implicit conversion directly allowed in java and not explicit.
 8. Write down the rules to follow while naming a variable. What are the two special characters which can be used in a variable name?
 9. What are tokens? Name the types of it.
 10. What are keywords or reserved words in JAVA? Can we use them as variable or class names?
-
